Dashboard Report

Week 3 — Opportunity & Learner Performance Dashboard (Excelerate)

Prepared by: Emmanuel Erioluwa Olowodu

Dashboard link: *https://datastudio.google.com/reporting/49e1df4f-fc72-4876-a9a9-560a5ccae1c0*

1. Dashboard Design

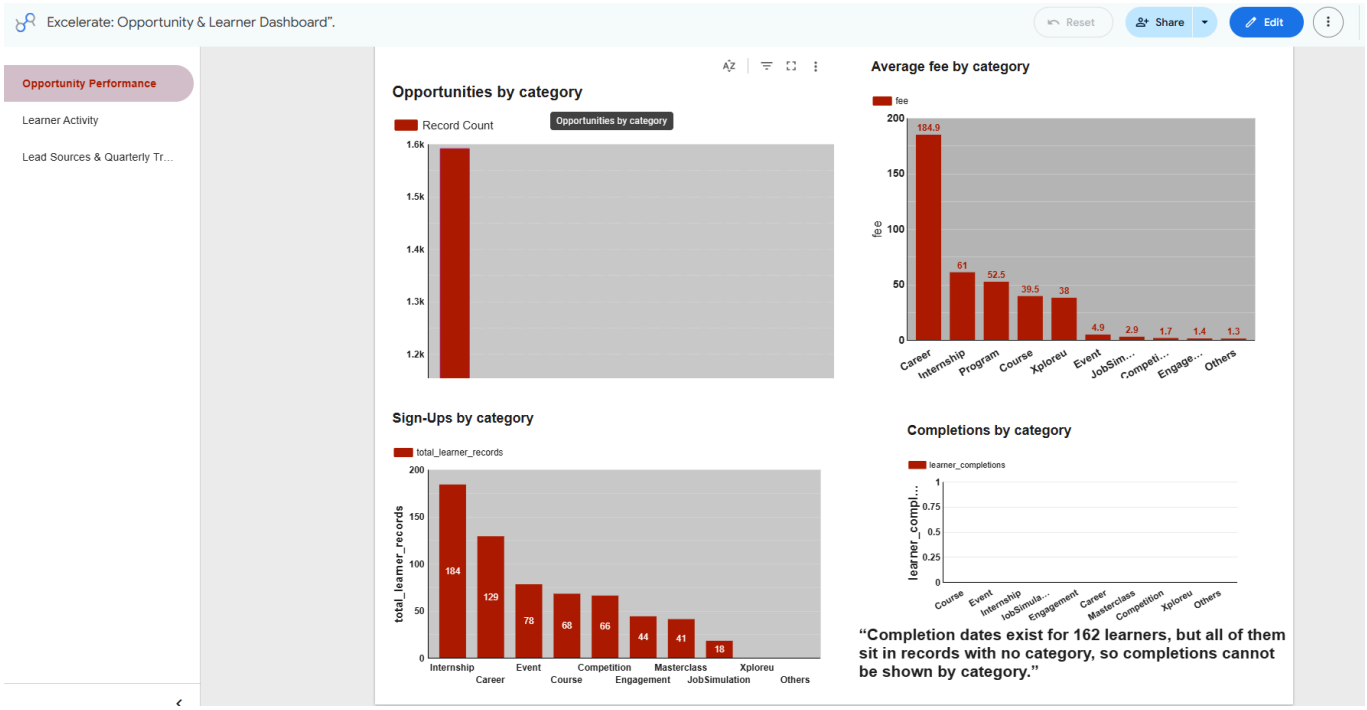

The dashboard helps a programme team see how opportunities are distributed, how learners are applying and paying, and which channels bring learners in. It is built in Looker Studio on three data sources connected to the Supabase PostgreSQL database: opportunity_data_clean, learner_data_clean and the integrated_category_summary view, all produced in Week 2.

Because no record-level link exists between the two datasets (Week 2), the dashboard is split into sections that each draw on one dataset, rather than implying a single unified view. Every chart has a stated purpose and a note wherever the data limits what it can show.

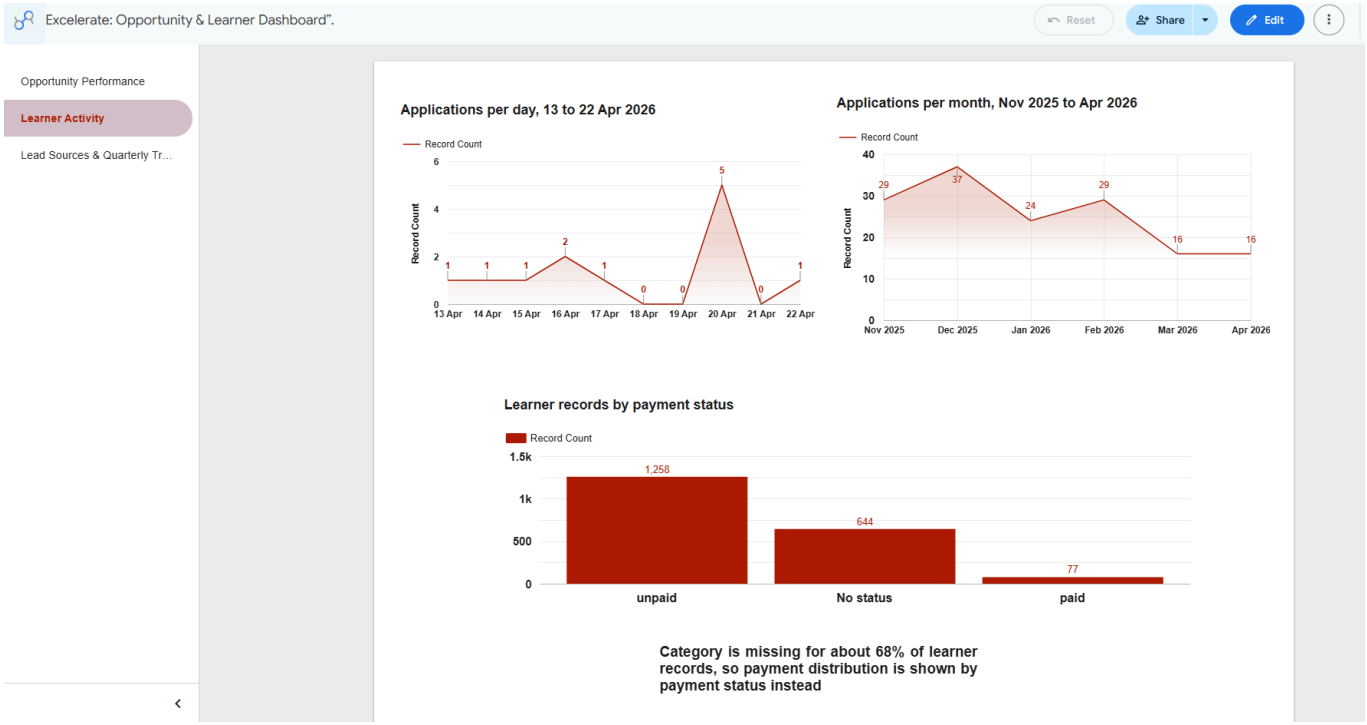

1.1 Page Structure

Page	Title	Charts
1	Opportunity Performance	1 Opportunities by category · 2 Average fee by category · 3 Learner records by category · 4 Completions by category
2	Learner Activity	5 Applications per day (latest seven active days) · 6 Applications per month (six months) · 7 Records by payment status
3	Lead Sources & Quarterly Trend	8 Learner records by lead source · 9 Q4 2025 vs Q1 2026 applications

PAGE 2

PAGE 3

1.2 Where the Dashboard Differs from the Brief

Several requested views could not be built exactly as written because of limits in the data. Each change is stated on the dashboard itself.

Brief asked for	What was built	Reason
Opportunities with highest and lowest sign-ups and completion rates	Sign-ups and completions by category (charts 3 and 4)	No field links a learner to a specific opportunity, so per-opportunity counts are not possible.
Reward distribution	Average fee by category (chart 2)	The Reward field holds embedded JSON references, not an amount. Fee is clean and numeric.
Scholarship distribution by category	Records by payment status (chart 7)	Category is missing for 68% of learner records, and only one of 1,328 records with a payment amount has a category.
Opportunity distribution by lead source	Learner records by lead source (chart 8)	Lead source exists only in Learner Data.
Application counts over the last 7 dates	The seven most recent dates with applications, 13 to 22 April 2026 (chart 5)	Applications are not recorded every day, and the data ends on 22 April 2026.
Application trend over the last 6 months	November 2025 to April 2026 (chart 6)	These are the latest six months of data. April covers only 22 days.

2. Visualisations

#	Chart	Source	Dimension / metric	What it shows
1	Opportunities by category (bar)	opportunity_data_clean	category / record count	Internship is the largest category at 1,591 of 5,727.
2	Average fee by category (bar)	opportunity_data_clean	category / average fee	Career is highest at 184.86, then Internship at 60.97.
3	Learner records by category (bar)	integrated_category_summary	category / total_learner_records	Internship 184 and Career 129, across 628 categorised records.
4	Completions by category (bar)	integrated_category_summary	category / learner_completions	Zero in every category; all 162 completions are uncategorised.
5	Applications per day (time series)	learner_data_clean	apply_date (day) / record count	12 applications over seven active days, 5 of them on 20 April.
6	Applications per month (time series)	learner_data_clean	apply_date (month) / record count	29, 37, 24, 29, 16 and 16 from November to April.
7	Records by payment status (bar)	learner_data_clean	payment_status / record count	Unpaid 1,258, no status 644, paid 77.

8	Lead source (horizontal bar)	learner_data_clean	from_where_did_you_hear_about_us / record count	Social Media leads with 576; 658 records have no source.
9	Q4 2025 vs Q1 2026 (scorecards)	learner_data_clean	apply_date range / record count	111 against 69, a 37.8% fall.

3. Metric Validation

Every metric on the dashboard was checked with a SQL query run against the same tables in Supabase. Each dashboard figure was compared with the result below.

3.1 Validation Query

```
SELECT 'C1 opportunities by category' AS metric, category::text AS label, COUNT(*)::numeric AS value
FROM opportunity_data_clean GROUP BY category
UNION ALL
SELECT 'C2 avg fee by category', category::text, ROUND(AVG(fee), 2)
FROM opportunity_data_clean GROUP BY category
UNION ALL
SELECT 'C3 learner records by category', TRIM(category)::text, COUNT(*)::numeric
FROM learner_data_clean GROUP BY TRIM(category)
UNION ALL
SELECT 'C4 completions by category', TRIM(category)::text, COUNT(completion_date)::numeric
FROM learner_data_clean GROUP BY TRIM(category)
UNION ALL
SELECT 'C5 applications per day', apply_date::date::text, COUNT(*)::numeric
FROM learner_data_clean
WHERE apply_date >= '2026-04-13' AND apply_date < '2026-04-23'
GROUP BY apply_date::date
UNION ALL
SELECT 'C6 applications per month', TO_CHAR(DATE_TRUNC('month', apply_date), 'YYYY-MM'), COUNT(*)::numeric
FROM learner_data_clean
WHERE apply_date >= '2025-11-01' AND apply_date < '2026-05-01'
GROUP BY DATE_TRUNC('month', apply_date)
UNION ALL
SELECT 'C7 records by payment status', COALESCE(payment_status, '(null)'), COUNT(*)::numeric
FROM learner_data_clean GROUP BY payment_status
UNION ALL
SELECT 'C8 lead source', COALESCE(from_where_did_you_hear_about_us, '(null)'), COUNT(*)::numeric
FROM learner_data_clean GROUP BY from_where_did_you_hear_about_us
UNION ALL
SELECT 'C9 Q4 2025 applications', 'Oct-Dec 2025', COUNT(*)::numeric
FROM learner_data_clean WHERE apply_date >= '2025-10-01' AND apply_date < '2026-01-01'
UNION ALL
SELECT 'C9 Q1 2026 applications', 'Jan-Mar 2026', COUNT(*)::numeric
FROM learner_data_clean WHERE apply_date >= '2026-01-01' AND apply_date < '2026-04-01'
ORDER BY metric, value DESC;
```

3.2 Results

Chart	Metric	SQL result
1	Opportunities by category	Internship 1,591; Career 1,087; Competition 734; Course 631; Event 621; Engagement 459; Masterclass 400; JobSimulation 198 (the other 6 records sit in three very small categories)
2	Average fee by category	Career 184.86; Internship 60.97; Course 39.52; Event 4.86; JobSimulation 2.89; Competition 1.72; Engagement 1.36; Masterclass 1.26

3	Learner records by category	Internship 184; Career 129; Event 78; Course 68; Competition 66; Engagement 44; Masterclass 41; JobSimulation 18; no category 1,351
4	Completions by category	0 in every category; all 162 completion dates fall in records with no category
5	Applications per day, 13 to 22 April 2026	13 Apr 1; 14 Apr 1; 15 Apr 1; 16 Apr 2; 17 Apr 1; 20 Apr 5; 22 Apr 1 (total 12)
6	Applications per month, Nov 2025 to Apr 2026	Nov 29; Dec 37; Jan 24; Feb 29; Mar 16; Apr 16 (total 151)
7	Records by payment status	Unpaid 1,258; no status 644; paid 77
8	Learner records by lead source	No source 658; Social Media 576; Illinois Institute of Technology 333; GlobalShala Website 128; Saint Louis University 98; Google Search 85; My Friend Or Relative 67; Northeastern University 17; Global Enrichment Program 8; Other 6; Rochester Institute of Technology 3
9	Q4 2025 vs Q1 2026 applications	111 against 69; (69 − 111) ÷ 111 = −37.8%

3.3 Reconciliation Checks

Check	Result
Opportunity categories sum to the rows in opportunity_data_clean	5,727 = 5,727
Learner records by category plus uncategorised	628 + 1,351 = 1,979
Payment status groups sum to all learner records	1,258 + 644 + 77 = 1,979
Lead source groups sum to all learner records	1,979
Monthly applications sum	29 + 37 + 24 + 29 + 16 + 16 = 151

3.4 Problems Found During Validation

Problem	Effect	Action
Eight amount_to_be_paid values above 10,000, the largest 6,000,000,000,000	Chart 7 showed a total of about 30 trillion	Set to NULL in learner_data_clean. The total is now 14,234 (unpaid 9,270; paid 4,964). The 10,000 cut-off is an assumption.
Category missing for 1,351 learner records (68%)	A payment chart by category would show a single bar	Chart 7 now uses payment status, with a note on the dashboard.
All 162 completion dates and all 203 usable application IDs sit in uncategorised records	Chart 4 shows zero for every category	Explained in a note under the chart and recorded as a limitation.
The text “null” in the Learner Data category field	Missing categories were not counted as missing	Converted to a true NULL.

4. Insights and Recommendations

4.1 Insights

- Opportunity mix: Internship (28%), Career (19%) and Competition (13%) make up about 60% of the 5,727 opportunities.

- Fees: Career averages 184.86 and Internship 60.97, while most other categories average under 5. Fees are recorded in USD, INR and EUR, so the averages are indicative.
- Learner interest: among the 628 learner records with a category, Internship (29%) and Career (21%) lead, mirroring the opportunity mix.
- Applications over time: Q4 2025 had 111 applications and Q1 2026 had 69, a fall of 37.8%. October 2025 accounts for about 45 of the Q4 total (111 less November's 29 and December's 37). Monthly applications then fell to 16 in March, a drop of about 64% from October. April's 16 covers only 22 days.
- Recent activity: the latest seven active days produced 12 applications, 5 of them on 20 April (42%). No applications are recorded after 22 April 2026.
- Payment: of the 1,335 records with a payment status, 77 (5.8%) are paid. A further 644 records (about a third) have no status.
- Lead sources: among the 1,321 records with a source, Social Media accounts for 44%. The four partner universities together account for 451 (34%), with Illinois Institute of Technology alone at 333 (25%). The GlobalShala website brings 10% and Google Search 6%. A third of learner records (658) have no source.

4.2 Recommendations

- Make category, lead source and payment status mandatory at sign-up. They are missing for 68%, 33% and 33% of learner records, which limits every analysis above.
- Investigate the fall in applications since October 2025. Compare it with campaign timing and intake cycles, and confirm the data extract is complete, since it stops on 22 April 2026.
- Protect the two strongest channels. Social Media and the partner universities bring in about 78% of learners with a known source, so deepening the Illinois Institute of Technology partnership is a sensible priority. Test whether the GlobalShala website converts better with more promotion.
- Review payment follow-up. Only 5.8% of learners with a status are marked as paid, so check whether unpaid means unbilled, pending or lapsed.
- Record each completion against a category and an opportunity. A bridge export linking learners to opportunity IDs would allow completion rates by opportunity, which the current data cannot provide.

5. Limitations

- No record-level join exists between Opportunity Data and Learner Data. The category-level integration covers only 628 of 1,979 learner records.
- The data ends on 22 April 2026, so April is a partial month and recent trends cannot be assessed.
- Average fees mix currencies, and amount_to_be_paid has no currency field.
- The Reward field is embedded JSON and is not available for analysis.
- The status codes are undecoded and 212 Learner Data columns are unnamed.
